Presentación

Otro año más, me toca -y me place- presentar la memoria de la asociación cluster del sector aeronáutico y espacial vasco que me honro en presidir.

Corrían estas mismas fechas del año pasado cuando en nuestra Asamblea General comentábamos las peculiaridades del año: una situación de crisis con fuertes impactos que cada empresa debería gestionar con el apoyo de todos, seguimos recibiendo retrasos en los programas de todo tipo de aviones y helicópteros civiles con impacto en el 2009 y 2010, era necesario resistir y prepararnos para el ramp-up que pudiera llegar, deberíamos conservar al máximo al personal formado y aprovechar la coyuntura baja, para implementar mejoras en la gestión interna y hacer énfasis en la cultura lean y desterrar los despilfarros e inefficiencias de todo tipo.

De esta manera, nos preparábamos para un mercado que nos podría estar esperando con tasas sostenidas de crecimiento tras este duro desierto, al que hemos tratado de adaptarnos con los siguientes resultados.

La cifra total de facturación de todos los asociados en todas sus plantas ha descendido un 5% -de 1229M€ a 1167M€- y la del empleo, en cambio, ha aumentado en un 8%-de 9055 empleados el año anterior a 9819- debido al incremento en plantas exteriores a Euskadi. Por lo que respecta a la actividad en la CAPV, aún cuando la facturación contabilizada en los centros de trabajo vascos ha aumentado en un 1,9%-de 624M€ a 636M€-, el empleo ha caído en 7 décimas -de 4035 trabajadores a 3752-. Esto parece indicar que, si bien realizamos trabajos de mayor valor añadido, no se han podido evitar pérdidas en personal dentro de nuestra tierra que se prevén recuperar en los años 2011 y siguientes. Las previsiones, con caídas del 10%, eran pesimistas, y las hemos logrado superar, pero muchas de nuestras empresas siguen en procesos de EREs, y la situación continúa complicada.

Entre los hitos de este año cuyas consecuencias en facturación y empleo no se notarán hasta dentro de al menos dos años, el primer vuelo de los Airbus A400M y Boeing 787 a finales de año, y los primeros vuelos del helicóptero Tigre y del nuevo modelo de avión de negocios Gulfstream 250, han representado un importantísimo hito en la aeronáutica internacional al igual que para las empresas de la asociación HEGAN, que aportan su tecnología y experiencia a estos proyectos que entran ahora en producción.

Resulta igualmente de gran trascendencia para el futuro de nuestras empresas el inicio en los trabajos para el Airbus A350XWB, fundamentalmente en las fases del diseño conceptual y de detalle de diversos componentes, utilajes y ensayos de certificación. AERNNOVA, AESTIS y el grupo ACITURRI, han obtenido importantes paquetes de trabajo a riesgo compartido en este avión de Airbus.

El ejercicio ha registrado también el impulso de la participación de nuestros socios en el sector de helicópteros, con nueva carga de trabajo para diversos modelos de Eurocopter y la intensificación en el programa S92 de Sikorsky, de quien AERNNOVA es socio a riesgo. En el área del espacio, SENER ha superado con éxito varias fases del parásol de la misión científica GAIA y mantiene la actividad en diversas plataformas.

Por su parte, ITP y Rolls-Royce firmaron en 2009 el contrato por el que la primera se convirtió en socio a riesgo de la turbina de baja presión del Trent XWB, que motorizará el avión de doble pasillo de Airbus, A350 XWB. Una vez que los programas contratados entren en producción, la cuota del mercado mundial de ITP en turbinas de baja presión para aviones de doble pasillo se situará en el 50%, sin duda un logro sin precedentes.

Destaca en este ejercicio el buen nivel de exportaciones alcanzado por las pequeñas y medianas empresas del sector. Nuestras PYMEs han sabido hacerse un hueco cada vez mayor, de forma directa, con contratistas de otros países a los que suministran desde grandes utilajes para estructuras de avión a piezas de nacelles (carenados), componentes estructurales y de motores, ensayos y reingeniería de procesos de fabricación y manipulación. En este sentido, la participación de los miembros de la asociación en el 48º salón aeroespacial de Le Bourget el pasado mes de junio, continúa favoreciendo el encuentro con grandes fabricantes y clientes.

Otro hecho relevante, a pesar de la coyuntura económica, ha sido el incremento de la inversión en I+D con respecto al año precedente, destinado en gran parte a los desarrollos de los programas mencionados. El porcentaje de esta inversión con respecto a la facturación que roza el 14% de su facturación, manifiesta claramente el esfuerzo de las empresas que autofinancian más del 80% de estas actividades.

En todo este panorama dominado por los OEM occidentales (Airbus, Boeing, Bombardier, Embraer...), no debemos olvidar las amenazas, y también oportunidades, que el desarrollo y próximo inicio de ventas de los aviones Superjet 100 de Sukhoi (Rusia), los ARJ21 y C919 de Comac (China) y el MRJ90 de Mitsubishi (Japón) nos presenta.

Dinamizar la cooperación, promocionar y representar al cluster, dar información de valor y acompañar a los asociados son las tareas principales a la que esta asociación cluster dedica su tiempo, conscientes que en estos años difíciles -y siempre- su papel debe centrarse en las personas a las que trata de servir, contribuyendo así al desarrollo de la sociedad.

Aurkezpena

Aurtengo honetan ere, niri dagokit -eta atsegain osoz egingo dut- ohore handiz lehen-dakari naizen Euskadiko aeronautika eta espazio sektoreko kluster elkartearen urteko txostena aurkeztea.

Iaz, garai honetan, urte hartako berezitasunei buruz hitz egiten ari ginen Biltzar Nagusian: inpaktu handiak sortzen ari zen krisi egoera bat genuen, eta enpresa bakoitzak kudeatu beharko zituen inpaktu horiek, guztion laguntzaz; mota guztietako hegazkin eta helikoptero zibilen programetan atzerapenak genituen, eta 2009. eta 2010. urteetan jasango genuen horren inpaktua; ezinbesteko zen egoerari eustea eta etor zitekeen ramp-up edo gorakadarako prestatzea; horretarako, prestatutako langile guztiei eustea komeni zen eta egoera apalari etekina ateratzea, barneko kudeaketan hobekuntzak abian jartzeko; gainera, lean kultura azpinarratu behar genuen, eta mota guztietako irioteak eta eraginkortasun falta baztertu.

Horrela, basamortu gogor honen atzean, hazkunde tasei eutsiko zien merkatu baterako prestatzen ari ginen, eta hauek dira egokitzeko saiakerak horretan lotu ditugun emaitzak.

Enpresa elkartu guztiek euren lantegi guztietan izandako fakturazio osoa % 5 jaitsi da -1.229M€-tik 1.167M€-ra- eta enpleguarena, aldiz, % 8 igo da -aurreko urtean 9.055 langile ziren, eta 9.819 iritsi dira-, Euskadik kanpoko lantegietan izandako hazkundeari esker. EAEn izandako jarduerari dagokionez, nahiz eta EAEnk lantokietan kontabilizatutako fakturazioa % 1,9 igo -624M€-tik 636M€-ra-, enplegu 7 hamarren jaitsi da -4.035 langiletik 3.752 langilera-. Horri kontuan hartuta, esan beharra dago, balio erantsi handiagoko lanak egin ditugun arren, ezin izan dugula gure herrian langile kopuruaren galera saihetsi, baina 2011n eta ondorengo urteetan berreskuratzea aurreikusten da. Aurreikuspenak ezkorra ziren, % 10eko beherakadak aurreikusten baitziren; hala ere, horiek gainditze lortu dugu, baina gure enpresatako askok erregulazio dosirerkin jarraitzen dute, eta egoera konplexua da oraindik.

Urte honetako mugarrien artean, urte amaieran egin ziren Airbus A400M eta Boeing 787 hegazkinen lehen hegaldia eta Tigre helikopteroaren eta Gulfstream 250 negozio hegazkin eredu berriaren lehen hegaldia aipatu behar dira, fakturazioan eta enpleguan hauen ondorioak nabarmendu ahal izateko gutxiez bi urte itxaron beharko badugu ere; nazioarteko aeronautikan garrantzi handiko mugariak izan dira, bai eta HEGANeko enprezentatz ere, orain ekoizpenean sartuko diren proiektu horiei teknologia eta esperientzia eskaintzen baitiete.

Garrantzi handia du gure enpresen etorkizunerako Airbus A350XWB eredu egiteko lanak hasteak ere, batez ere diseinu kontzeptualaren fasean eta hainbat osagairen, tresneria-ren eta egiaztapen entseguren xehetasunak emateko fasean. AERNNOVAK, AESTISek eta ACITURRI taldeak lan sorta garantitsuak lortu dituzte arriskua partekatuta, Airbuseko hegazkin honetan.

Ekitaldi honetan, gure bakkideek helikopteroen sektorean izan duten parte-hartzea ere sustatu egin da, eta Eurocopter ereduetarako lan karga berria dute, eta Sikorsky-ren S92 programan, AERNNOVA arrisku baziidea den horretan, parte-hartzea areagotu egin da. Espazioaren esparruan, SENER-ek arrakastaz gainditu ditu GAIA misio zientifikoaren eguzkitakoaren faseak, eta plataforma askotan lanean jarraitzen dute.

Bestalde, ITPk eta Rolls-Royce etxeak 2009an kontratu bat sinatu zuten, eta horren ondorioz, ITP Trent XWB programaren behe presioko turbinaren lanketan arrisku baziidea bilakatu zen; programa horrek Airbuseko korridore bikoitzeko hegazkinaren motorrak egingo ditu, A350 XWB hegazkinarenarenak. Kontratutako programak ekoizten hasten direnean, korridore bikoitzeko hegazkinetarako behe presioko turbinen merkatuan, ITPk munduko merkatuan % 0,6eko kuota lortuko du; kuota hori aurrekaririk gabeko mugaria da, zalentzariak gabe.

Azpimarratzeko da ekitaldi honetan sektoreko enpresa txiki eta ertainek lotu duten esportazio maila. Gure ETE-ek beste herrialdeetako kontratistekin duden zuzeneko harremana gero eta sendoagoa izan dadin lortu dute, eta, besteak beste, hegazkinen egituretarako tresneria handiak, saskiaren piezak (karenatzreak), egituren eta motorren osagaiak, entseguk eta fabrikazio eta manipulazio prozesuen berringeniaritza hornitzen dituzte. Zentzu horretan, joan den ekainean, elkarteko kideek Le Bourgeteko 48. azoka aeroespazialean parte hartzutzen, eta horrek fabrikatzalea eta bezero handiekin elkartzeko aukera ematen du.

Beste gertakari garantzitsu bat I+Gn egin den inbertsioaren gorakada izan da, gaur egungo testuinguru ekonomikoa kontuan hartuta eta aurreko urtearekin alderatuta; aiaputatuko programa horien garapenera zuzendu dira gehien bat. Inbertsioaren ehunekoak, fakturazioari dagokionez, fakturazioaren % 14 ingurukoa izan da; beraz, argi eta garbi ikusi da enpresek jarduera horien % 80 autofinantzatzeko egin duten ahalegina.

Mendebaldeko OEMak (Airbus, Boeing, Bombardier, Embraer...) nagusi diren testuinguru honetan, ezin ditugu ahaztu Sukhoi etxearen Superjet 100 hegazkinen (Errusia), Comac etxearen ARJ21 eta C919 hegazkinen (Txina) eta Mitsubishi etxearen MRJ90 hegazkinaren (Japonia) garapenak eta salmentak adierazten dizkiguten mehatxuak eta aukerak.

Lankidetza dinamizatzea, klusterra sustatzea eta ordezkatzea, baliozko informazioa ematea eta elkarteko kideei lagunza eskaintzea dira kluster elkartea honen zeregin nagusia. Eta zerbitzua ematen dien pertsona horiei zuzendu zaie klusterraren zerginaria beti eta, bereziki, urte zail hautean, horrela, gizartearen garapenean laguntzeko.

Presentation

Once again, it is my duty – and pleasure – to present the report of the Basque Aerospace Cluster Association of which it is my honour to be president.

It was this time last year when the General Assembly met to discuss some of the year's events: a crisis with severe consequences for all our members and which each company had to face with everyone's support. There were further delays in the programmes of all kinds of civil aircraft and helicopters, the effect of which would have an impact on our business in 2009 and 2010. It was necessary to try and get by and to prepare ourselves for the up-turn, whenever that came. We had to keep as many trained personnel as possible and to take advantage of the economic slump in order to bring about improvements in our internal management systems and to follow the dictates of lean culture and to get rid of wastefulness and inefficiencies of all kinds.

In this way, we prepared ourselves for the new business that was waiting, we hoped, just around the corner, with the promise of sustained growth in contrast to this period of hardship to which we have tried to adapt ourselves with the following results.

The total turnover of all members in all their plants dropped 5% -from 1229M€ to 1167M€- while employment, on the other hand, increased 8% -from 9055 the previous year, to 9819, due to the increase in plants outside the Basque Country. With respect to industrial activity in the Basque Autonomous Community, despite the 1.9% increase recorded in Basque work centres from 624M€ to 636M€, employment fell 7 tenths from 4035 workers to 3752. This seems to indicate that, although we were engaged in projects of greater added value, it has not been possible to avoid job losses in this country. However, we expect to recover these as of 2011. The expected 10% drop in employment turned out to be pessimistic and we have largely been able to avoid such drastic measures, but many of our companies have had to draw up Labour Force Adjustment Plans and the situation is still difficult.

Some of the highlights of this year, the effects of which on turnover and employment will not be noticed until at least a couple of years have gone by, include the first flight of the Airbus A400M and Boeing 787 at the end of the year and the first flights of the Tigre helicopter and the new model of business aircraft, the Gulfstream 250. These represent a major milestone both international aeronautics and for HEGAN member companies, who have contributed their technology and experience to these projects, which are now entering production.

2009 saw the beginning of work on an extremely important project for our companies, the Airbus A350XWB, which is basically at the conceptual and detailed design stage of several components, tools and certification tests. AERNOVA, ALESTIS and the ACITURRI Group have secured large work packages for this Airbus aircraft as risk partners.

The year also saw an increase in the participation of our members in the helicopter sector with a new series of projects for several models of the Eurocopter and there has been an intensification of the Sikorsky S92 programme for which AERNOVA is risk partner. In the space sector, SENER has successfully completed several stages of the parasol for the GAIA scientific mission and maintains a high level of activity in several platforms.

For their part, in 2009, ITP and Rolls-Royce signed a contract whereby ITP became a risk partner in the Trent XWB low pressure turbine project, which will propel the twin-aisle Airbus A350 XWB. Once these programmes start production, ITP's share of the worldwide market for low pressure turbines used in twin-aisle aircraft will stand at 50%, without doubt an unprecedented achievement.

Attention should be drawn to the high level of exports achieved by small and medium-sized companies in this sector. Our SMEs are doing more and more work for contractors in other countries to whom they supply a number of different products ranging from large tooling for aircraft structures to nacelle parts (fairings), structural and engine components, tests and the re-engineering of manufacturing and handling processes. In this sense, the participation of members of the Association at the 48th Le Bourget trade fair last June proved very successful. This event continues to be an excellent opportunity to meet large manufacturers and customers.

Another relevant fact (despite the economic situation) was the increase in R&D investment compared to the previous year, used mainly for the development of the aforementioned programmes. The percentage of this investment over turnover, which represents almost 14% of turnover, is a clear indication of the efforts being made by companies who auto-finance more than 80% of these activities.

In this scenario dominated by western OEMs (Airbus, Boeing, Bombardier, Embraer...), we should not forget the threats and opportunities for our companies in the form of the development and forthcoming sales of the Superjet 100 aircraft of Sukhoi (Russia), the ARJ21 and C919 of Comac (China) and the MRJ90 of Mitsubishi (Japan).

Encourage cooperation, promote and represent the Basque aerospace cluster, provide valuable information and give support to the members are the main aims of this cluster association which is aware of its important role in these difficult times. It must concentrate -now and always- on the people it tries to serve, contributing in this way to the development of the society.

A handwritten signature in black ink, appearing to read "José Luis OSORO".

José Luis OSORO
President of HEGAN

La asociación

Misión y Visión

HEGAN es una asociación privada sin ánimo de lucro que agrupa entidades vascas, creada con el fin de potenciar, promover y estimular el tejido del sector aeronáutico y espacial del País Vasco.

Su misión es contribuir a la creación de puestos de trabajo de alta especialización, el desarrollo científico y técnico de nuestra sociedad y la consolidación de nuestra industria en actividades de mejor futuro y más valor añadido.

Su visión es la de aspirar a representar a todo el sector aeronáutico y espacial vasco y a ser una referencia internacional como asociación cluster que da respuesta a los retos estratégicos del sector mediante la cooperación.

Organización

Asamblea General

Es el máximo órgano de la Asociación. Está integrada por todos los socios y es, por tanto, el foro de expresión de la voluntad de éstos.

Junta Directiva

Es el Órgano Colegiado de Administración y Dirección. Sus miembros son designados por la Asamblea General y son:

José Luis Osoro -Presidente- AERNNOVA
Ignacio Mataix -Vicepresidente- ITP
Jorge Unda -Secretario- SENER
Inmaculada Freije -Vocal- GOBIERNO VASCO
Juan Antonio Alberdi -Vocal- NUTER
Carlos Olabe -Vocal- PCB
Lara Cuevas -Vocal- SPRI
José Juez Lángara - Director de HEGAN

Comité Ejecutivo

Este comité, delegado de la Junta Directiva, actúa como órgano ejecutivo en las actuaciones del Cluster, se reúne bimestralmente y sus miembros 2009 fueron:

Alfredo Esquisabel -Presidente- AERNNOVA
Juan José Martín - AEROMEC
Juan Miguel López Uria - GOBIERNO VASCO
Xabier Berasategi - GRUPO TTT
Plácido Márquez - ITP
Juan Antonio Alberdi - NUTER
Carlos Olabe - PCB
Javier Viñals - SENER
Javier Gabilondo - SPRI
José Juez Langara - Director de HEGAN
Martín Fdez. Loizaga - Director Adjunto de HEGAN

Grupos de trabajo

A partir de 2005 los comités permanentes de HEGAN sufrieron una reestructuración pasando a ser grupos de trabajo temporales y flexibles dedicados específicamente a actuaciones puntuales y reportando al Comité Ejecutivo. Estos grupos de trabajo se crean y desaparecen a voluntad de los asociados y según sus necesidades específicas del momento. En 2009, los grupos de trabajo más activos fueron el Comité Estratégico, el Grupo de Trabajo de la Agenda de Innovación Sectorial, y el Grupo de Trabajo del Aula Aeronáutica.

Equipo de HEGAN

El equipo permanente de la Asociación es el siguiente:

Mentxu Díaz, Responsable de Administración
Martín Fdez. Loizaga, Director Adjunto
José Juez Langara, Director
Ana Rodríguez, Responsable de Operaciones

Elkartea

Misioa eta Ikuspegia

HEGAN euskal enpresak biltzen dituen irabazi asmorik gabeko elkartea pribatua da, Euskal Autonomia Erkidegoko sektore aeronautikoaren eta espazialaren ehuna indartzeko, sustatzeko eta bultzatzeko sortutakoa.

Especializazio handiko lanpostuak sortzea, gure gizarteko garapen zientifika eta teknikoa bultzatzea eta gure industrian etorkizunera begira aukera zabalagoa eta balio erantsi handiagoa izango dituzten jarduerak finkatzen laguntea da elkartearren misioa.

EAeko sektore aeronautiko eta espacial osoa ordezkatu nahi du, eta nazioartean erreferentzia izan nahi du kluster elkarrengisa, sektoreko dema estrategikoei lankidetzan oinarritutako erantzuna eskainiz.

Antolamendua

Biltzar nagusia

Hauxe da elkarteko organo gorena. Bazkide guztiak osatzen dute, eta beraz, bazkideen asmo eta gogoak adierazteko foroa da.

Zuzendaritza batzordea

Administrazioa eta Zuzendaritzako Taldeko Organoa da. Honako hauak dira bertako kideak, Biltzar Nagusiak 2009rako izendatutakoak:

José Luís Osoro -Lehendakaria- AERNNOVA
Ignacio Mataix -Lehendakariordea- ITP
Jorge Unda -Idazkaria- SENER
Inmaculada Freije -Batzordekidea- EUSKO JAURLARITZA
Juan Antonio Alberdi -Batzordekidea- NUTER
Carlos Olabe -Batzordekidea- PCB
Lara Cuevas -Batzordekidea- SPRI
José Juez Lángara - HEGANeko Zuzendaria

Batzorde betearazlea

Zuzendaritza Batzordearen ordezkari den talde hau organo betearazlea da klusterraren jardueretan, bi hilean behin batzen da, eta hauak dira 2009ko kideak:

Alfredo Esquisabel -Lehendakaria- AERNNOVA
Juan José Martín - AEROMEC
Juan Miguel López Uria - EUSKO JAURLARITZA
Xabier Berasategi - GRUPO TTT
Plácido Márquez - ITP
Juan Antonio Alberdi - NUTER
Carlos Olabe - PCB
Javier Viñals - SENER
Javier Gabilondo - SPRI
José Juez Langara - HEGANeko Zuzendaria
Martín Fdez. Loizaga - HEGANeko Zuzendarri Laguntzailea

Lan taldeak

2005. urtetik aurrera, HEGANeko batzorde iraunkorak berregituratu egirizten, eta horien ordez behin-behineko lan talde malguak, ekintza zehatzetara zuzendutakoak, sortu ziren, Batzorde Betearazlearekin lotuta. Lan talde horiek bazkideen nahierara sortzen eta desagertzen dira, unean uneko behar berezien arabera. 2009an, Estrategia Batzordea, Berrikuntza Sektorialeko Agendako Lan Taldea eta Aeronautika Gelako Lan Taldea izan dira lan talde aktiboenak.

HEGANeko taldea

Elkarteko talde iraunkorra honako hauak osatzen dute:

Mentxu Díaz, Administrazio Arduraduna
Martín Fdez. Loizaga, Zuzendarri Laguntzailea
José Juez Langara, Zuzendaria
Ana Rodríguez, Eragiketen Arduraduna

The Cluster association - HEGAN

The Association

Mission and Vision

HEGAN is a private, non-profit association that groups together a number of Basque entities, and was set up to foster, promote and stimulate the aeronautics and space sector of the Basque Country.

It aims to contribute to the creation of highly-specialised jobs, promotes the scientific and technical development of our society and the consolidation of our industry through activities that ensure a better future and greater added value.

HEGAN aspires to represent the entire aerospace sector of the Basque Country and to be an international model of a cluster association that, through cooperation, provides collective response to the strategic challenges of the sector.

Organisation

General Assembly

This is the highest-ranking body of the Association. It is made up of all member companies and is therefore the body that represents their wishes.

Governing Council

This is the Collegial Body of Administration and Management. Appointed by the General Assembly, its members in 2009 were as follows:

José Luis Osoro -President- AERNNNOVA
Ignacio Mataix -Vice president - ITP
Jorge Unda -Secretary- SENER
Inmaculada Freije -Member- BASQUE GOVERNMENT
Juan Antonio Alberdi -Member- NUTER
Carlos Olabe -Member- PCB
Lara Cuevas -Member- SPRI
José Juez Langara - Managing Director of HEGAN

Executive Committee

This committee, delegated by the Board of Directors, acts as executive body in the activities pursued by the Cluster. It meets on a two-monthly basis and its members in 2009 were as follows:

Alfredo Esquisabel -President- AERNNNOVA
Juan José Martín - AEROMEC
Juan Miguel López Uria – BASQUE GOVERNMENT
Xabier Berasategi - Grupo TTT
Plácido Márquez - ITP
Juan Antonio Alberdi - NUTER
Carlos Olabe - PCB
Javier Viñals - SENER
Javier Gabilondo - SPRI
José Juez Langara - Managing Director of HEGAN
Martín Fdez. Loizaga - Deputy Director of HEGAN

General Assembly 2009

Workgroups

As of 2005, the permanent committees of HEGAN were restructured in temporary and flexible workgroups dedicated to a number of specific actions, reporting to the Executive Committee. These workgroups are created and dissolved according to the wishes of associate members and in accordance with their specific needs at each moment in time. In 2009, the most active workgroups were the Strategic Committee, the Sector Innovation Agenda Workgroup, and the Aeronautics Classroom Workgroup.

HEGAN's Team

Members of the permanent team of the Association are as follows:

Mentxu Díaz, Administration
Martín Fdez. Loizaga, Deputy Director
José Juez Langara, Director
Ana Rodríguez, Head of Operations

Resumen de las actividades de hegan

En 2009, HEGAN, con objeto de intentar mejorar su eficiencia y eficacia operativa, realizó un módulo de EUSKALIT –Fundación Vasca para la Excelencia– para la implantación de la gestión por procesos.

Tras los primeros ejercicios de identificación de los procesos, tanto los operativos, como los de apoyo, en los que la Asociación desplegaba sus tareas, nuestro mapa de procesos quedó definido. A continuación, y de forma esquemática, presentamos las actividades llevadas a cabo por HEGAN en 2009 en base a ese mapa.

Las personas

El mayor valor del que disponemos en las organizaciones son las personas: personas capacitadas y motivadas que sean capaces de aportar lo mejor de sí mismas para el desarrollo sostenible de nuestra sociedad. Con el fin de dotar a HEGAN de personal suficiente, adecuadamente formado y competente para el desarrollo de su actividad en el tiempo, la Asociación se ha adentrado en un plan de desarrollo de personas que comenzó en 2009 y que durará hasta finales de 2010.

Este proceso da soporte a otros operativos en el que destaca el trabajo de dinamización de la cooperación dentro del cluster. Y en el área de personas y formación, nos hemos centrado en difundir la importancia de las personas en las organizaciones, elaborar un nuevo temario para el Aula Aeronáutica de la Escuela Superior de Ingeniería de Bilbao (UPV-EHU), con la aportación de nuevo profesorado procedente de nuestros socios y renovar el convenio que garantice su financiación. También se ha continuado con las relaciones con Bizkaia:Xede para la atracción de talento al País Vasco y con el impulso para responder a las necesidades de formación profesional del sector, la bolsa de empleo interna y algunas actividades de formación agrupada.

La estrategia

Según el diccionario de la Real Academia, se trataría del arte para dirigir algo. En matemáticas, es el conjunto de las reglas que aseguran una decisión óptima en cada momento. Si las personas son importantes, la estrategia va unida intrínsecamente a las mismas, en cuanto que son ellas las que proporcionan directrices, políticas y actuaciones.

En 2009 acabó el proceso de reflexión estratégica, que permitió establecer el Plan Estratégico de HEGAN 2009-2012 (PE0912) y que se desplegó en el plan de acción anual. Por su parte, también la Asociación realizó un proceso de reflexión interna, cuyo resultado ha sido una Agenda de Innovación que comprende los factores de competitividad de la Asociación, los retos derivados y un plan de actuación que da respuesta a éstos.

La promoción y la representación

Una de las tareas más palpables de HEGAN es la que realiza intentando consolidar su presencia, y la de los asociados, a nivel internacional en reuniones, ferias, misiones y visitas, participando en encuentros y eventos y dedicando un notable esfuerzo a mantener y profundizar las relaciones con representantes de regiones y empresas identificadas como estratégicas para el sector aeronáutico y espacial vasco que manifiestan interés en conocer la realidad del cluster.

Así, hemos gestionado la participación del Cluster en la feria de Le Bourget de París, coordinamos la presencia vasca en la convención de negocios de Aerosolutions en Burdeos, participamos activamente en el EACP (European Aerospace Clusters Partnership), hemos representado al sector ante el renovado Gobierno Vasco y ante la red de relaciones clave para el sector y nuestros asociados que se va actualizando periódicamente. Entre éstas, estuvimos presentes –como Socios Adheridos- en el proceso de disolución de ATECMA (Asociación Española de Fabricantes de Material Aeroespacial) y la creación de la nueva TEDAE, que aglutina a las empresas, no sólo con actividad aeronáutica y espacial, sino también de defensa, con la que ya trabajamos.

En 2009, también hemos trabajado para que HEGAN siga representando a todos los agentes que desarrollan este sector y fue la alianza tecnológica IK4 la que entró a formar parte de la Asociación.

HEGANeko jardueren laburpena

2009an, HEGANek, eragiketetarako duen eraginkortasuna hobetzeko, EUSKALITeko –Bikaintasunerako Euskal Fundazioa – modulu bat egin zuen, prozesuetan oinarritutako kudeaketa ezarri ahal izateko.

Elkartearren xede ziren proiektuak, eraginkorrik izatera nahiz babesha ematera zuzendutakoak, identifikatzeko ariketak egin ondoren, gure prozesuen mapa zehaztuta gelditu zen. Hemen dituzue, eskema modura, HEGANek 2009an mapa horren arabera egin dituen jarduerak.

Pertsonak

Pertsonak dira erakundeetan balio handiena dutenak: prestatutako eta motibatutako pertsonak, gure gizartearen garapen iraunkorrerako duten guztia emateko gai direnak. HEGANek etorkizunean bere jarduera garatzeko behar adina langile aditu eta trebe izan ditzan, 2009an abian jarri zen pertsonen garapenerako plan batean sartu da elkarlea, eta 2010eko amaiera arte iraungo du planak.

Prozesu hori beste eragile batzuen euskarri da, eta, bereziki, klusterra barnean lankidetzaren esparruan egiten ari den dinamizatzeko lana nabarmendu behar da. Pertsonen eta prestakuntzaren arloetan, pertsonen erakundeetan duten garrantzia zabaltzen bideratu dugu gure lana, eta Bilboko Ingeniaritzar Goi Eskolako (UPV-EHU) Aeronautika Gelarako ikasgaien zerrenda berria ere egin dugu, gure baxkide diren etxeetako zenbait kide irakasle lanetan hasi dira, eta horren finantzaketa bermatuko duen hitzarmena berritu da. Bizkaierkin genituen harremanei ere eutsi zaie: talentua Euskal Herriko erakartzeko gune izan dadin lortu nahi da, sektoreko prestakuntza profesionalaren beharrei, barne enpleguko poltsari eta taldeko prestakuntza jarduera batzuei erantzuteko.

Estrategia

Errege Akademien hiztegiaren arabera, zerbait zuzentzeko antzea edo abilezia da. Matematikan, une bakoitzean erabaki egokiena hartuko dela bermatzen duten arauen multzoa da. Pertsonak garrantzitsuak badira, estrategia berez horiei lotuta doa, pertsonak baitira ildoak, politikak eta jarduketak garatzen dituztenak.

2009an, gogoeta estrategikoaren prozesua amaitu zen; prozesu horri esker, HEGANen 2009-2012rako Plan Estrategikoa (PE0912) ezerri zen, eta urteko ekintza planean hedatu zen. Bestalde, elkartea barne gogoeta bat ere egin zuen, eta, gogoeta horren ondorioz, Berrikuntzako Agenda gauzatu zen. Elkartearren lehiakortasun faktoreak, hortik erorritako erronkak eta horie erantzuteko jarduketa plana jasotzen ditu agenda horrek.

Sustapena eta ordezkaritza

HEGANek lan handia egiten du bere presentzia eta empresa elkartuena naziartean sendotzeko; horretarako, bileretan, azoketan, misioetan eta bisiteten parte hartzentzu du, eta ahalegin handia egiten du Euskadiko sektore aeronautikorako eta espazialerako estrategikoak diren eskualdeetako eta enpresetako ordezkariekin, klusterra ezagutzeko interesa agertzen duten horiekin, dituzten harremanei eusteko eta horietan sakontzeko.

Horrela, Parisko Le Bourget-eko azokan klusterrak izandako parte-hartzea kudeatu dugu, Aerosolutions-ek Bordelen egindako negozioen topagunean euskaldunok izandako presentzia koordinatu dugu, EACPN (European Aerospace Clusters Partnership) parte-hartze aktiboa izan dugu, berriku berri den Eusko Jaurlaritzaren aurrean sektorea ordezkatu dugu, bai eta sektorearentzat eta gure baxkideentzat giltzarri den harremanen sarearen aurrean ere, aldian behin eguneratu egiten baita. Horien artean, ATECMAREN (Aeroespazioko Material Ekoizleen Espainiako Elkarte Teknikoa) desegite prozesuan izan ginan –baxkide atxiki gisa- eta baita TEDAE berriaren sorreran ere; TEDAEk, aeronautikako eta espazioko enpresez gain, defentsa sektorekoak ere barnean hartzen ditu, sektore horretan lehendik ari bagara ere.

2009an, lanean aritu gara, HEGANek sektore hau garatzen duten eragile guztien ordezkarri izaten jarrai dezan, eta IK4 teknología aliantza elkarteko kide bilakatu da.

3

Summary of HEGAN activities

With the aim of improving its operating efficiency and efficacy, in 2009, HEGAN did an EUSKALIT Module (Basque Foundation for Excellence) to introduce the process management system. Following an initial identification of the operating and support processes in which the Association is engaged, our process map was defined. The activities carried out by HEGAN in 2009 are set out below schematically.

People

People are of the greatest assets available to organisations: skilled and motivated people, capable of contributing their very best for the sustainable development of our society. In order to provide HEGAN with sufficient personnel, adequately trained and competent for the development of its activities, the Association has entered upon a personnel development plan which began in 2009 and will continue until the end of 2010.

This process supports other members of staff and highlights the revitalising effect of co-operation within the cluster. In the area of personnel and training, we have tried to disseminate the importance of people in organisations, to draw up a new syllabus for the Aeronautics Classroom of the Higher School of Engineering of Bilbao (UPV-EHU), with the contribution of new teaching staff by our members and to renew the agreement that guarantees its financing. Relations with Bizkaia:Xede have also continued in order to attract talent to the Basque Country and with the aim of responding to the professional training needs of the sector, the internal job pool and a number of group training activities.

Strategy

According to the Spanish dictionary, the term "strategy" refers to the art of directing something. In mathematics, it is the set of rules that ensure that the best decision is taken at each moment in time. As people are important, strategy is closely linked to them inasmuch as they are the ones who provide guidelines, policies and actions.

2009 saw the end of the strategic reflection process which led to the establishment of the 2009-2012 HEGAN Strategic Plan (PE0912), developed in the annual action plan. For its part, the Association carried out a process of internal reflection, resulting in an Innovation Agenda which sets out the competitiveness factors of the Association, the challenges these pose and an action plan developed as a consequence.

Promotion and representation

One of HEGAN's most palpable tasks is to try to consolidate the presence of the Association and its members at an international level at meetings, trade fairs and missions, and visits, taking part in seminars and events and dedicating considerable effort to maintain and develop relations with representatives of those regions and companies identified as being of strategic importance for the Basque aeronautics and space sector and which have shown interest in finding more about the activities of this cluster Association.

We have, in this way, organised the participation of the Association at the Le Bourget fair in Paris, co-ordinated the Basque presence at the Aerosolutions business convention in Bordeaux, taken an active part in the EACP (European Aerospace Clusters Partnership) and represented the sector in dealings with the new Basque Government and the network of key relationships for the sector and our associates, which is updated from time to time. We took part, as full Members, in the dissolution process of ATEC-MA (Spanish Aerospace Material Manufacturers Association) and the creation of the new TEDAE, which groups together the companies (not only engaged in Aeronautics and space activities but also defence) that we deal with.

In 2009, we also worked to ensure that HEGAN continues to represent all the agents engaged in the development of the sector and the IK4 Technology Alliance came to form part of the Association.

La inteligencia competitiva

La inteligencia competitiva trata de ofrecer el conocimiento necesario para respaldar la correcta toma de decisiones. Este proceso abarca la comprensión del sector y la anticipación de acontecimientos futuros. Mediante herramientas y técnicas específicas, se extraen los datos de distintas fuentes, se depura la información, se estructura en áreas de interés identificadas y se preparan para una efectiva y práctica lectura. HEGAN ha desarrollado, gracias a la iniciativa del EJGV, y con el apoyo de centros tecnológicos de la Red Vasca de Tecnología, el sistema de inteligencia competitiva del cluster (SICC); contrata, desde hace más de tres años, un recorte de prensa diario amplio, bastante sectorial, y mantiene una intranet privada para el asociado con información relevante y de interés.

La dinamización de la cooperación

Creemos que hay dos palabras clave para desarrollar el sector y permitirle ser eficiente en el tiempo: INNOVACIÓN y COMPETITIVIDAD. Si además le unimos la COOPERACIÓN, eje principal de la misión de HEGAN, tenemos los ingredientes necesarios para el éxito sostenible del cluster aeronáutico y espacial vasco. Conjugando estos tres conceptos, HEGAN, ha dinamizado a las asociadas para la generación de lo que llamamos la Agenda de Innovación Sectorial. Este documento, fruto del trabajo de los asociados, recoge algunos de los proyectos en colaboración que los miembros del cluster han considerado estratégicos. Proyectos que no sólo entran dentro de la esfera de la tecnología, sino que abarcan otras áreas como son la internacionalización, la transformación empresarial, o el emprendizaje avanzado. Además, HEGAN se encuentra inmerso como cluster piloto en el proyecto de Evaluación Participativa, coordinado por ORKESTRA –Instituto vasco de Competitividad– y que pondrá las bases para crear una herramienta que permita evaluar a los clusters y conocer cómo responden éstos a la mejora de la competitividad de cada uno de los sectores. Finalmente, han sido varias las acciones de sensibilización de calidad y de medioambiente, destacando la participación de HEGAN en el Comité Europeo Asesor de la Calidad Aeroespacial (EAQG).

Adimen lehiakorra

Adimen lehiakorrak erabakiak zuen hartzeko beharrezko den ezagutza esaintzea du helburu. Prozesu horrek sektorearen ezagutza eta etorkizuneko gertakariei aurrea hartzen hartzan ditu barnean. Tresna eta teknika berezien bidez, hainbat iturritatik datuak ateratzen dira, informazioa garbitzen da, identifikatutako arlo interesgarrien arabera egituratzen da eta irakurketa eraginkorra eta praktikoa egiteko prestatzen da. HEGANek, EJGVren ekimenari esker, eta Teknologiarako Euskal Sareko teknologia zentroen laguntzaz, klusterraren adimen lehiakorrerako sistema garatu du (SICC); duela hiru urtetik hona egunkarian egunero zati zabal bat kontratatura du, nahiko sektoriala dena, eta bapkideentzat intranet pribatua du, informazio garrantzitsua eta interesgarria eskaintzen duena.

Lankidetzaren dinamizazioa

Sektoea garatzeko eta denboran eraginkorra izateko aukera emateko bi gago hitz daudela uste dugu: BERRIKUNTZA eta LEHIAKORTASUNA. Bi hitz horiei LANKIDETZA, hau da, HEGANen misioaren ardatz nagusia dena, gehitzan badiegu, Euskadiko aeronautikako eta espazioko klusterraren arrakasta iraunkorra lortzeko beharrezkoak diren osagai guztia izango ditugu. Hiru kontzeptu horiek bateratuz, bapkideak dinamizatu ditu HEGANek, Berrikunta Sektorialeko Agenda sortzeko. Bapkideen lanaren ondorioz sortutako dokumentu horrek lankidetzan oinarritutako proiektu batzuk jasotzen ditu, klusterreko kideek estrategikotzat jotzen dituztenak. Proiektu horiek ez dira teknologiaren esparrukoak soilik, beste arlo batzuk ere hartzentzitze, besteak beste, nazioartekotasuna, enpresen aldaketa edota ekintzaileta aurreratua. Horrez gain, ORKESTRAK –Lehiakortasunerako Euskal Institutua– koordinatzen duen Ebaluazio Parte Hartzailearen Proietkuan kluster pilotu gisa sartuta dago HEGAN; klusterren ebaluazioa egiteko eta horiek sektore bakoitzaren lehiakortasuna hobetzen nola laguntzen duten ezagutzeko, tresna bat sortzeko oinariak ezarriko ditu proiektu horrek. Azkenik, kalitateari eta ingurumenari buruzko sentsibilizazio ekintza ugari egin dira, eta HEGANek Sektore Aeroespacialaren Kalitaterako Europako Taldean (EAQG) izandako parte-hartzea azpimarratu behar da.

La comunicación

En la actualidad es imprescindible incorporar la comunicación a la estrategia de la empresa, y su vez, implantar un modelo estratégico en la comunicación de la organización. Ésta tiene para HEGAN como fin, informar, pero también influir positivamente para transformar la sociedad. A través de las acciones de comunicación de la Asociación, pretendemos dar a conocer la realidad del sector aeronáutico y espacial vasco: su dimensión, sus capacidades, sus fortalezas y su realidad. Para ello, hemos invertido parte de nuestro tiempo a la creación de la nueva imagen del Cluster; a la implementación de una nueva web, más actual y completa, a la coordinación y gestión de un plan de comunicación cada vez más ambicioso –que permita transmitir la realidad del cluster y su aportación a la sociedad- y a la publicación del informe anual.

Komunikazioa

Gaur egun ezinbestekoa da komunikazioa enpresaren estrategian txertatzea, eta, aldi berean, erakundearren komunikazioan eredu estrategiko bat ezartzear. HEGANentzat, informatza du helburu horrek, baina baita gizartearen aldaketan eragin positiboa izatea ere. Elkartearren komunikazio ekintzen bidez, Euskadiko aeronautikaren eta espazioaren sektorea ezagutarazi nahi dugu: sektorearen tamaina, gaitasunak, sendotasuna eta errealtitatea. Horretarako, gure denboraren zati batean honako alderdi hauek landu ditugu: klusterraren irudi berria sortu dugu, eguneratuagoa eta osoagoa den webgune berria abian jarri dugu, gero eta handinahi handiagoko komunikazio plan bat kudeatu dugu –klusterraren errealtitatea eta horrek gizarteari egiten dion ekarpena helarazteko aukera emango duena-, eta urteko txostena argitaratu dugu.

3

Summary of HEGAN activities

Competitive intelligence

Competitive intelligence attempts to provide the necessary knowledge to ensure that the correct decisions are taken. This process involves an understanding of the sector and the anticipation of future events. Through specific tools and techniques, data is obtained from different sources, information is filtered and structured in identified areas of interest and prepared for an effective and practical reading. Thanks to an initiative of the Basque Government and with the support of the technology centres of the Basque Technology Network, HEGAN has developed the competitive intelligence system of the Cluster (SICC).

For more than three years, HEGAN has contracted an extensive dossier of daily sector-related press cuttings and maintains a private intranet for members containing relevant and interesting information.

Fostering cooperation

We believe that there are two keywords to develop the sector and to ensure its efficiency for the future: INNOVATION and COMPETITIVENESS. Together with COOPERATION, the raison d'être of HEGAN, these provide the necessary ingredients for the sustainable success of the Basque aeronautics and space cluster. By combining these three concepts, HEGAN has encouraged members to generate what we call the Sector Innovation Agenda. This document, the result of the work of our members, contains some of the collaboration projects that cluster members consider to be strategic. These projects are not limited to the realm of technology but include other

areas such as internationalisation, business transformation and advanced learning. Moreover, as a pilot cluster, HEGAN is immersed in the Participative Evaluation project, co-ordinated by ORKESTRA –Basque Competitiveness Institute- which will establish the basis for the creation of a tool which will enable clusters to be evaluated and determine how these respond to improvements in the competitiveness of each one of the sectors. Finally, there have been a number of actions to increase awareness of quality and environmental issues. One of the most important was HEGAN's participation in the European Aerospace Quality Advisory Committee (EAQG).

Communication

Today it is essential to include communications in any business strategy and in turn, introduce a strategic model in the communications of an organisation. For HEGAN, the aim of communications is to inform but also to exert a positive influence in order to transform society. Through the communications actions of the Association, our aim is to provide information about the situation of the Basque Aeronautics and Space sector: its

dimensions, its capacities, its strengths and its situation. To do this, we have invested a part of our time to creating a new image for the Cluster, to the introduction of a new, more modern and complete website, to the coordination and management of a evermore ambitious communications plan that will allow us to transmit the situation of this sector and its contribution to society – as well as the publication of the annual report.

CTA	CALTUM	Aerodynamics: Development of advanced instrumentation calibration methodology for application in low-pressure turbine and complete engine tests.	SAIOTEK - Regional	Aircraft and Space Engineering
CTA	ACTIP	Aerodynamics: Reduction of secondary flows flows in low pressure turbines through active tip clearance control	SAIOTEK - Regional	Aircraft and Space Engineering
CTA	DEXIAL	Aerodynamics: Development of axial spacing optimisation tools between turbine blades	SAIOTEK - Regional	Aircraft and Space Engineering
CTA	FIBERSEN:	Comparative study of fibre-optic tests and traditional structural monitoring sensors under real flying conditions	SAIOTEK - Regional	Aircraft and Space Engineering
CTA	FIRETRAN:	Study of safety requirements in the case of fires of new materials used in advanced transport	SAIOTEK - Regional	Aircraft and Space Engineering
EUVE	PLATINO - COBOR	Simulation of conditions in UAV	PSE	Aircraft and Space Engineering
EUVE	PLATINO - HADA	Visualisation of UAV trajectories in synthetic environment	PSE	Aircraft and Space Engineering

R&D Projects

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
EUVE	AIRHEM	Electronics for transport: Health Monitoring for structures	ETORTEK	Aircraft and Space Engineering
EUVE	ALICIA	Electronics for transport: Development of the new cabin concept and optimisation of operations under all conditions	FP7-AAT	Aircraft and Space Engineering
IK4	Thermo mechanical fatigue tests with minimum thermal and phase gradients	CICYT		Aircraft and Space Engineering
IK4	MARVEL: structural integrity monitoring with ultrasonic radar built into reusable shuttle vehicles	Sensor systems - Aernnova		Aircraft and Space Engineering
IK4	SINTONIA: non manned systems oriented to minimal environmental impact	alternatives to conventional drive systems in order to minimise consumption / CESA	CENIT - National	Aircraft and Space Engineering
IK4	ELUBSYS: engine lubrication systems technologies	Advanced propulsion plants: Optimisation of oil and fuel consumption, improving engine lubrication	FP7 - European	Aircraft and Space Engineering
IK4	RC2: quick and cost-cutting manufacturing of functional prototypes for gas turbines made of pile up metallic layers	Manufacture and maintenance: Rapid manufacture of aeronautical turbine blade prototypes by means of "laser cladding" technique	Eureka-Profit	Aircraft and Space Engineering
ITP	AIDA - Aggressive Intermediate Duct Aerodynamics for Competitive and Environmentally Jet Engines	Aerodynamics: Development of transition ducts between compressors and between turbines in order to reduce consumption and noise emitted by turbomachinery.	FP6 - European	Aircraft and Space Engineering
ITP	DREAM - Validation of Radical Engine Architecture Systems	Advanced propulsion plants: Study of new architectures for propulsion plants based on the open-rotor concept	FP7 - European	Aircraft and Space Engineering

EUVE ALICIA Project

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
ITP	FUTURE - Flutter-Free Turbomachinery Blades	Aerodynamics: Technological development to reduce the flutter phenomenon in turbomachinery blade crowns	FP7 - European	Aircraft and Space Engineering
ITP	JTI - Clean Sky	Advanced propulsion plants: Development of new concepts for the future generation of aircraft propulsion plants in accordance with the environmental requirements established by ACARE.	FP7 - European	Aircraft and Space Engineering
ITP	MAGPI - Main Annulus Gas Path Interactions	Interaction of secondary flows with the main flow and effects of cavities in turbomachinery.	FP6 - European	Aircraft and Space Engineering
ITP	MASIR - Advanced Noiseless Machining	Noise reduction: Techniques to reduce noise in industrial environments engaged in the precision machining and well-being of parts.	National Calls	Aircraft and Space Engineering
ITP	NOISE MEASUREMENT - Optimisation and validation of techniques for the advanced measurement of noise in a jet engine.	Advanced instrumentation: Optimisation and validation of techniques for the advanced measurement of noise in a jet engine.	Madrid Region Calls - Regional	Aircraft and Space Engineering
ITP	OPENAER - New engine and aircraft configurations for the future air transport system	Aerodynamics, Methods, Materials, Mechanical design, Manufacture and Control.: Development of technologies for the design and manufacture of components in the hot area of an aeronautical gas turbine in "open-rotor" configuration	CENIT - National	Aircraft and Space Engineering
ITP	PREMECCY - Protective Methods for Combined Cycle Fatigue in Gas Turbines	Fatigue prediction: Study of mechanisms and prediction of fatigue in turbomachinery	FP6 - European	Aircraft and Space Engineering
ITP	SACMI - Advanced Control and Monitoring System of ITP	Control systems: Development of a control system applied to the fuel control unit of an aeronautical engine.	Madrid Region Calls - Regional	Aircraft and Space Engineering
ITP	TATMO - Turbulence and Transition Modelling for Specigla Turbomachinery	Aerodynamics: Improvements in efficiency by means of non-stationary at aerodynamic analysis	FP6 - European	Aircraft and Space Engineering
ITP	VITAL - Environmentally Friendly Aero Engine	Advanced propulsion plants: Integrated project. Substantial reductions in emissions (-18% of CO2) and noise (-6dB).	FP6 - European	Aircraft and Space Engineering
ITP	ERICKA - Engine Representative Internal Cooling and Applications	Technologies for turbine refrigeration	FP7 - European	Aircraft and Space Engineering
ITP	ELUBSYS - Engine Lubrication System Technologies	New lubrication technologies in gas turbines	FP7 - European	Aircraft and Space Engineering

ITP	OPENAIR - Optimisation for low Environmental Noise Impact Aircraft	Technologies for reducing noise in aircraft	FP7 - European	Aircraft and Space Engineering
ITP	TAG - Feasibility studies for the development of general aviation turbines	Feasibility studies for the development of low pressure turbines, structures and external components in turbines for general aviation	SAE - National	Aircraft and Space Engineering
SENER	Robotic arm for extravehicular activities in space	Robot arm	ESA - European	Aircraft and Space Engineering
SENER	HDR qualification with potentiometers			Aircraft and Space Engineering
SENER	HISAC (Environmentally Friendly High Speed Aircraft)	Assess the feasibility of a small, environmentally friendly and economically feasible supersonic transport aircraft.	FP6 - European	Aircraft and Space Engineering
SENER	Image navigation			Aircraft and Space Engineering
SENER	NICE TRIP (Novel Innovative Competitive Effective Tilt Rotor Integrated Project): convertible aircraft-helicopter	SENER designs the rotor components, the drive system and the nacelle	FP6 - European	Aircraft and Space Engineering
SENER	NOESIS - Aerospace nanotube hybrid composite structures with sensing and actuating capabilities	Development of composite material with carbon nanotubes and with sensorial and drive capacity, by itself for aeronautics applications.	FP6 - European	Aircraft and Space Engineering
SENER	OPENAER	Study new aircraft and engine configurations for the future care transport system.	CENIT - National	Aircraft and Space Engineering
SENER	VULCAN - Vulnerability analysis and new materials and design approaches for aircraft strengthening against fire and blast due to accident or terrorist attacks	Development of improved design for substructures with high energy absorption capacity materials in the presence of fire and explosion.	FP6 - European	Aircraft and Space Engineering
SENER	DEIMOS - Development and innovation of polymeric membrane and solid oxide fuel cells	Fuel piles for aircraft: Development and innovation of fuel piles of polymeric membrane and solid oxide	CENIT - National	Aircraft and Space Engineering
SENER	SENARIO - Advanced sensors and novel concepts for intelligent and reliable processing in bonded repairs	Attitude control systems: Development of innovating sensorial systems linked to intelligent control equipment and aerostructures maintenance methodologies.	FP6 - European	Aircraft and Space Engineering
SENER	AGCFO	Operations on the ground and in captive flight in an air-transported microlauncher	SAE - CDTI	Aircraft and Space Engineering

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
SENER	HEALTH-HM	Real-time monitoring of aeronautical actuators to determine operating failures and operability levels	GAITEK-Regional	Aircraft and Space Engineering
SENER	ELGA	Integrated landing gear system by means of electromechanical drive and control (EMLG – ElectroMechanical Landing Gear)	INNOTEK-Regional	Aircraft and Space Engineering
SENER	SINTONIA	Unmanned zero environmental impact oriented systems.	CENIT- Nacional	Aircraft and Space Engineering
SISTEPLANT	PLATINO - HADA - UAV convertible aircraft-helicopter	Led by INTA, Sistaplant provides the health monitoring system	CDTI - National	Aircraft and Space Engineering
SISTEPLANT	SIMAP - UAV health monitoring system	Design of health monitoring system for UAV	CDTI - National	Aircraft and Space Engineering
TECNALIA	DEIMOS - Development and innovation of polymeric membrane and solid oxide fuel cells	Fuel cells for aircraft: Development of fuel cells for APUs/Collaboration with CESA-EADS/ Consortium also with SENER, CASA, AIRBUS, etc	CENIT - National	Aircraft and Space Engineering
TECNALIA	SUPERSKYSENSE - Development of a sensorised system for determining the deterioration of the Skydroll	Sensor for systems: Device with sensors to determine online the deterioration of the skydroll/ AIRBUS, INTERLAB, CESA, etc...	FP6 - European	Aircraft and Space Engineering
TEY	Heat treatments	SIEGEL	VARIOS	Aircraft and Space Engineering
TEY	Heat treatments	SENER	VARIOS	Aircraft and Space Engineering
ACITURRI	MAFFIX	Flexible tooling	FP6 - European	Processes and Materials
ACITURRI	RC2	Rapid prototyping for functional tests	FP7 - European	Processes and Materials
ACITURRI	Flexible solutions for producing the aeronautical mechanisms test	Increase in the testing and manufacturing capacity of hydraulic actuators based on the flexibility of the installations	CDTI - National	Processes and Materials
AERNNOVA	ARTIMA	Aircraft Reliability through Intelligent Materials Application	FP7 - European	Processes and Materials
ALESTIS	WINDOW FRAME A380	DEVELOPMENT OF COMPOSITES		Processes and Materials
ALESTIS	PAX DOOR A330	DEVELOPMENT OF COMPOSITES		Processes and Materials
ALESTIS	360º Fabric Composite	DEVELOPMENT OF COMPOSITES		Processes and Materials
BURULAN	More integrated offer	Development of a new plant for surface treatments, primer and final paint, assemblies and stapling of ball and socket joints.	Internal development	Processes and Materials

R&D Projects

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
CTA	COMPOFIRE	Engineering and Processes: Study of fire behaviour of advanced structural composites estructurales aused in Aeronautics	LIA CENTROS - National	Processes and Materials
CTA	DEMETIR:	Study of thermographic techniques applied to the detection of critical defects in metal components	SAIOTEK - Regional	Processes and Materials
EUVE	VIRTUAL TESTING	Modelling of composites and simulation by means of finite element calculation.	PSE	Processes and Materials
EUVE	ICARO	Analysis of the use of ultrasound for measuring	CENIT	Processes and Materials
IK4	Augmented reality for assembling aeronautical equipment	EADS		Processes and Materials
IK4	VARIPASS	MPB Aerospace and Kennametal Ibérica	PROFIT - National	Processes and Materials
IK4	Manufacturer and prediction of service life in high responsibility parts for aviation turbine is	ITP & PRECICAST	INTEK - Regional	Processes and Materials
IK4	OPENAER: New aircraft and engine configurations for the future system of air transport	Predicting service life in critical rotating components - manufacturing strategies (machining) at thickness limit / ITP, Danobat, Lealde and others	CENIT - National	Processes and Materials
IK4	ISAM-A. Materials with auto-sensorial capacity; investigation of magnetorheological damping systems for aircraft		CDTI - National	Processes and Materials
IK4	ASPIRATE	IDEKO-IK4, Orta S. Coop., Zubiola S. Coop, INVENT GmbH - The main objective of ASPIRATE is to develop an innovative technology for machining carbon and glass fibre reinforced plastic (CFRP and GFRP) parts	FP7 - European	Processes and Materials
IK4	Blade repair workshop	Manufacturing and maintenance: Línea Aérea and Danobat	Profit / Privado	Processes and Materials
IK4	DEIMOS: control and monitoring of hydrogen pile prototype	Reliability and maintenance - CESA	CENIT - National	Processes and Materials
IK4	INUDE	Aernnova	ETORGAI - Regional	Processes and Materials
IK4	RAMPE: alternative coatings to environmentally ontaminating heavy metals	Development of highly contaminating tribiological replacement coatings	PROFIT - National	Processes and Materials
IK4	TATEM: technologies and tools for novel maintenance Concepts	Maintenance	FP6 - European	Processes and Materials

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
IK4	AIRHEM: health monitoring en aeronáutica	Maintenance - Sensorisation and monitoring / CTA	Etortek - Regional	Processes and Materials
IK4	HEMA: actuators health monitoring	Maintenance - sensorisation and monitoring of aeronautical actuators / SENER		Processes and Materials
IK4	ALTERA: alternative treatments to replace Cr and Cd	Steam phase physical deposition of non-contaminating replacement coatings	PROFIT - National	Processes and Materials
IK4	FOREMOST: fullerene-based opportunities for robust engineering: making optimised surfaces for tribology	Creation of nanostructured surfaces through the addition of inorganic fullerenes to improve tribological features	FP6 - European	Processes and Materials
IK4	EUSKESTUR: Basque collaboration project vto manufacture a new generation of turbine radial structures	Modelling of manufacturing process to reduce development time and improve cathode design / PECM Engineering	Etorgai - Regional	Processes and Materials
IK4	MANUFACTURING 0,0	Efficient management of the latest materials and by means of nonconventional electrochemical techniques	ETORTEK	Processes and Materials
ITP	ACCENT - Adaptive Control of Manufacturing Processes for a New Generation of Jet Engine Components	Process simulation: Development of adaptive control technologies for terrible machine component oriented manufacturing processes	FP7 - European	Processes and Materials
ITP	DIALPE - Fatigue life design and verification of the vibration behaviour of gas turbine monocrystal blades	Mechanical technology: Study of fatigue and service life behaviour of small size monocrystal blades for a gas turbine.	Madrid Region Calls - Regional	Processes and Materials
ITP	FANTASIA - Flexible and Near-Net-Shape Generative Manufacture Chains and Repair Techniques for Complex Shaped Aero Engine Parts	Repair: advanced processes. New manufacturing and repair techniques based on LMD (Laser Metal Deposition) and LDF (Laser Direct Forming)	FP6 - European	Processes and Materials

IK4

R&D Projects

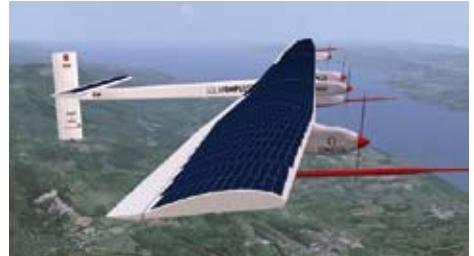

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
ITP	MATERIALES - Oxy carbide layers of multicomponent silicon on metal alloys surfaces by plasma spray	Development of the application of coatings by means of plasma spray	PROFIT - National	Processes and Materials
ITP	RAMPE - Alternative coatings to heavy metals (RAMPE)	Residue removal: Development of alternative coatings for removing Cr-VI	PROFIT - National	Processes and Materials
ITP	VERDI - Virtual Engineering for Robust Manufacturing with Design Integration	Process simulation: Production of scrap during the development stage (virtual tests) and reduction of engine weight (emission reduction)	FP6 - European	Processes and Materials
ITP	EUSKESTUR	Manufacturing technologies: Development of Basque excellence pole for the manufacture of radial structures for aeronautical turbines	Basque Country Calls - Regional	Processes and Materials
NOVALTI	OPENAER	ITP - NOVALTI-WEC	CENIT - National	Processes and Materials
NOVALTI	ADVANTICUT	NOVALTI-IDEKO	MANUNET - European	Processes and Materials
NUTER	Integrated product management			Processes and Materials
SENER	High precision linear actuator (HPLA)	High precision Linear Actuator based on own design, applicable to deployment mechanisms	ESA GSTP - European	Processes and Materials
SENER	DATAFORM - Digitally Adjustable Tooling for manufacturing of Aircraft panels using multi-point FORMing methodology	Development of a flexible technology for the manufacture of metal aircraft panels, based on computer-controlled multipoint tooling methodology	FP7 - European	Processes and Materials
SENER	Definition of component admisibles in carbon fibre and the effects on the fatigue life of hybrid structures			Processes and Materials
SENER	HEMA (Health Monitoring for Actuators)	Definition of a real-time monitoring system for electromechanical actuators for the determination of operating failures and operability level, providing high added value for the final product	SAE - National	Processes and Materials
SENER	Miniaturised Deployment Regulator MDR	Regulator appropriate for the deployment of small appendices or mini satellite panels		Processes and Materials
SENER	Literary Actuator with potentiometers (HDRA_P)	Rotating actuator for space applications (HDRA) incorporating angular position sensors (potentiometers).		Processes and Materials
SENER	HP-SMART-EMA	Development of high energy density electrical actuators	FP7 - European	Processes and Materials

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
SENER	RESTAURAC	Development of a demonstrator for the restoration of degraded images due to high compression levels 2008	COINCIDENTE - National	Processes and Materials
SIEGEL		Research into wire cutting of aeronautical materials		Processes and Materials
SISTEPLANT	ICARO - composite aerostructures	Industrialisation in advanced materials - Led by Airbus, research into materials and manufacturing systems for aerostructures	CDTI - National	Processes and Materials
TECNALIA	NANOMULFUN - Improvement of electrical conductivity of composite laminates by adding nanomaterials	Development of conductive nanocomposites: Development of composite materials with conductivity by means of the use of nanotechnology for electrical dissipation / AIRBUS ESPAÑA; UCIII	LIA CENTROS - National	Processes and Materials
TECNALIA	AGAPAC- Cu-D and Cu-CNT based encapsulates for devices in GaN	Materials for encapsulating Power Electronics based on GaN / Thales Alcatel, Egide, Plansee...	FP7 - European	Processes and Materials
TECNALIA	AMFSS - Multifunctional structures	Sandwich composite materials with embedded electronics and highly thermal dissipation capacity	ESA GSTP - European	Processes and Materials
TECNALIA	EXPERT- Heat protections of shuttle vehicles	Development of inter-metallic materials for use in the experimental re-entry capsule EXPERT	ESA GSTP - European	Processes and Materials
TECNALIA	HIPER - Research into future space propulsion systems	Ceramic materials for thrusters / SNECMA	FP7 - European	Processes and Materials
TECNALIA	ADVITAC - Advanced integrated composite tail cone	Development of new composite materials and technologies for the tail cone of future regional aircraft / DAHER Aerospace, Coriolis, FRT, Univ. Cranfield...	FP7 - European	Processes and Materials
TECNALIA	IAPETUS - Innovative repair of aerospace structures with curing optimization & life cycle monitoring abilities	Development of structural repair processes by means of new materials and technologies / Huntsman, Inasco, HAI, DAHER, Univ. Patras...	FP7 - European	Processes and Materials
TECNALIA	ICARO - Innovation in advanced composite and optimised rear-end	Development of new technologies for future aircraft in composite/ Collaborations with AIRBUS, AERNOVA,CASA ESPACIO, IDEC, SISTEPLANT	CENIT - National	Processes and Materials
TECNALIA	LAYSA - Multifunctional layer for safer aircraft composite strutures	Developments of multifunctional laminated composite materials/ Aernnova, Aries Complex, Inasco, HAI, Univ. Patras, etc...	FP7 - European	Processes and Materials
TECNALIA	VULCAN - Vulnerability analysis and new materials and design approaches for aircraft strengthening against fire and blast due to accident or terrorist attacks	Development of explosion and fire resistant composite materials/ Inasco, Sener, HAI, Univ. Patras, etc...	FP6 - European	Processes and Materials

R&D Projects

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
TECNALIA	SENARIO - Advanced sensors and novel concepts for intelligent and reliable processing in bonded repairs	Dielectric sensors in RTM moulds for monitoring composite filling and curing processs / Inasco, Bombardier, etc...	FP6 - European	Processes and Materials
TECNALIA	NOESIS - Aerospace nanotube hybrid composite structures with sensing and actuating capabilities	Development of composite materials with autosensing capacity in carbon nanotubes / Inasco, Sener, HAI, Univ. Patras, etc...	FP6 - European	Processes and Materials
TECNALIA	Technical feasibility study of the RF technology for the curing of aeronautic grade carbon fibre matrix composite	New composite curing processes: Project commissioned by AIRBUS ESPAÑA on the radiofrequency curing technology of carbon fibre composites		Processes and Materials
TECNALIA	NACAR - Removal of the CD in aeronautical coatings	New treatments : Project developed for BOEING R&T Europe	LIA CENTROS - National	Processes and Materials
TECNALIA	NACAR - Cr-free CONVERSION COATINGS- Technologies for the elimination on non-environmentally friendly elements in the aerospace industry	New treatments for aluminium: Project developed for BOEING R&T Europe	LIA CENTROS - National	Processes and Materials
TEY	Heat treatments	WEC	VARIOS	Processes and Materials
TEY	Heat treatments	ITP	VARIOS	Processes and Materials
WEC	OPENAER	Characterisation of laser weld in parts for error nautical engines	CENIT - National	Processes and Materials
WEC		Characterisation of optimised laser cutting parameters in aeronautical materials		Processes and Materials
ALESTIS	LEADING EDGE A400M	BIRD IMPACT COMPOSITES		Tests
CTA	ALF	Optimisation and development of new tooling for accelerated life tests	SAIOTEK - Regional	Tests
CTA	Fire certification tests for interior materials		BOEING R&T	Tests
CTA	SPACECAP	Development of the spatial technologies	SAIOTEK - Regional	Tests
CTA	SIMAVANT:	Development of impact systems for the study of advanced composite materials	SAIOTEK - Regional	Tests
NOVALTI	Turbine blades for test RIGs	PTB4++, PTB8, PTB9		Tests
SENER	Generic testbed for Guidance, Navigation and Control systems (GNC / AOCS)	Test bench	ESA - European	Tests

MEMBER	ACRONYM and/or NAME OF THE PROJECT and brief description	PROJECT SUMMARY / RELEVANT DETAILS / CONSORTIUMS	CALL	Research Area
TECNALIA	PREMECCY - predictive methods for combined cycle fatigue in gas turbine blades	Fatigue tests of engine materials: Development of fatigue test rig for up to 850°C and titanium and nickel base test / Rolls Royce, Turbomeca, SNECMA, ITP, etc...	FP6 - European	Tests
TECNALIA	Pneumostatic linear motion systems with structure based on new generation materials	Tests on composite parts: Development of a linear movement system for a machining system/ INTEK project approved by MNT ERANET/ Commissioned by IDEC	INTEK - Regional	Tests
TECNALIA	Assesment of Cr-free biocide fuel tank paints according a new biocide activity immersion test	Tests on paints in tanks: Development of testing protocols to assess the buyers' side effect of paints without chrome content / AIRBUS ESPAÑA		Tests
ALTRAN	ATLANTIDA: Application of Leader Technologies to UAVs For Research and Development in Air Transit Management (ATM)	Air Traffic Management: The Atlántida project tackles scientific and technological challenges for the introduction of higher levels of automation in the future management of airspace. This project is led by BOEING.	CENIT - National	Air Navigation

Acknowledgements

Elements of the natural world are present on every page of this report.

When we open it, immediately we find a panoramic view that reminds us of the importance of getting away from the daily grind and of seeing life from a broader perspective.

The magnificence of flight seen from close-up invites us to delve into the living world of our members: the unfolded wings and supporting elements imitate birds; the spirals of the snails remind one of the turning movement and the silence of modern engines. A complex and precise image allows us to enter the world of systems and equipment. A tiny figure reminds us of the importance of maintenance, space regards us in silence and in another well-known animal we discover the work of generating ideas, in cooperation and in networks.

The results of the whole, the sum of each and every one of the people in each member of the Association, build mountains of stones that are apparently the same but are rich in their diversity. There are many small things that contribute to and generate economic growth, social welfare and, especially, personal development. And on the way, we have chanced upon a great variety of clients and programmes on which we have worked from the beginning, from north to south, travelling through infinite landscapes ...

We close the book just as we opened it with an image of one of the most important continental wetlands in the Basque Country next to a photograph of an original flying object. From Euskadi to the entire world, different people who, by joining forces develop themselves and learn something new every day, in an attempt to make progress for the benefit and development of society and to ensure that the world remains alive and clean.

Many thanks to everyone for allowing us to continue along this road.

The HEGAN team

Agradecimientos

Hemos recorrido estas páginas acompañados por la naturaleza.

Al abrir el informe, enseguida nos hemos encontrado con una vista panorámica, que nos ha recordado la importancia de procurar separarnos de nuestra realidad diaria para alcanzar una visión más completa.

La majestuosidad del vuelo ya cercano nos ha invitado a adentrarnos en el mundo viviente de los asociados: las alas desplegadas y los elementos sustentadores imitan a las aves; los giros de las caracolas recuerdan el movimiento rotatorio y el silencio de los motores modernos; una imagen compleja y precisa nos introduce en el mundo de los sistemas y equipos; un figura diminuta en equilibrio nos recuerda la importancia del mantenimiento; el espacio nos mira sin decir palabra; y con otro conocido animal descubrimos los trabajos de generación de ideas, en cooperación y en red.

Los resultados del conjunto - la suma de todas y cada una de las personas de cada una de las entidades de la asociación - logran construir montañas de piedras aparentemente iguales pero ricas en su diversidad. Son los muchos pocos que suman y suman y generan desarrollo económico, bienestar social... y, sobre todo, desarrollo personal. Y en el camino nos hemos encontrado con una gran variedad de clientes y programas con los que se ha trabajado desde el principio de norte a sur, recorriendo parajes infinitos....

Cerramos el libro como lo abrimos, con una imagen de uno de los humedales continentales más valiosos del País Vasco junto a la de un original elemento volador. Desde Euskadi para todo el mundo, personas diferentes que al asociarse se enriquecen y aprenden día a día tratando de vivir la estructura mental de ganar-ganar para que la sociedad que les acoge se enriquezca y siga manteniéndose viva y limpia.

Gracias a todos por ayudarnos a seguir recorriendo estas sendas.

Esker onez

Naturan murgilduta egin dugu orri hauetako ibilbidea.

Txostena irekitzean, berehala, bista panoramiko batekin egin dugu topo, eta ikuspegia osoagoa lortzeko eguneroko errealtitatetik aldentzen saiatzeak duen garrantzia gogorazi digu horrek.

Jada gertu dugun hegaldiaren handitasunak baziak mundu bizian sartzen gonbidatu gaitu: zabaldutako hegoek eta elementu eusleek hegaztiak imitzen dituzte; oskolen birek motor modernoen hididura birakaria eta isiltasuna oroitarazten dute, eta irudi konplexu eta zehatz batek sistemeta ekipoen munduan murgiltzen gaitu; orekan dagoen irudi ñimiño batek, berriz, mantente lanen garrantzia dakarkigu gogora; eta ezaguna dugun beste animalia baten laguntzaz, lankidetza oinarrituta eta sarean ideiak sortzeko egindako lanak aurkituko ditugu.

Multzoaren emaitzek –elkarteko erakunde bakotzeko pertsona bakotzaren eta guztien baturak osatzen du multzo hori– haritzko mendiak eraikitzea lortzen dute, itxura batean berdinak izan arren, aniztasunean benetan aberatsak direnak. Gutxikako horiek batuz eta batuz eratutako andana horiek dira garapen ekonomikoa, gizartearen ongizatea eta, batez ere, garapen pertsonala sorrarazten dutenak. Bidean, askotariko bezero eta programen egin dugu topo, eta lehenengo unetik iparraldetik hegoalderaino lan egin dugu horiek, amaiagabeo bazterretan barrena...

Liburia ireki dugun modu berean itxiko dugu: Euskal Herrian dugun balio handieneko hezegune kontinental baten irudia dugu, elementu hegalari batzen irudiaren ondoan. Euskaditik mundu osoarentzat, elkartean sartzen direnean aberastu egiten diren pertsonak ditugu, etengabe ikasten ari direnak, babesten dituen gizartea aberasten dutenak, bizirik eta garbi iraun dezan; azken finean, egunez egun irabazi-irabazi kontzeptuan oinarritako buruko egitura bizitzen ahalegintzen direnak.

Eskerrik asko guztioi bazter hauetan barrena ibiltzen lagundi diguzuelako.
